

Slide-Out Pantry – Detailed Build Instructions

Overview

A slide-out pantry is an excellent space-saving solution for kitchens, small apartments, and tiny homes. Built with drawer slides and caster wheels, it glides smoothly in and out of narrow gaps, offering easily accessible vertical storage.

Step 1 — Measure & Mark Width

Use a measuring tape to determine the available gap for your pantry. Mark the exact width and installation height to ensure a proper fit.

Step 2 — Attach Drawer Slides

Install drawer slides directly onto the wall or cabinet side. Keep them perfectly level for smooth sliding.

Step 3 — Assemble the Frame

Cut and prepare wooden panels. Assemble the frame using screws, ensuring it matches the width measured earlier. Add shelves as needed.

Step 4 — Attach the Casters

Install four caster wheels at the bottom of the frame. This ensures stability, easy movement, and smoother operation.

Step 5 — Secure Frame to Slides

Position the completed frame next to the installed slides. Secure the frame to the slides using screws so it glides in and out without friction.

Step 6 — Install & Test Pantry

Slide the pantry in and out several times to ensure smooth motion. Make any adjustments necessary for alignment and stability.

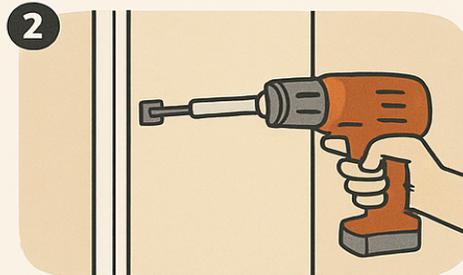

How to Build a Slide-Out Pantry

Tools & Supplies Needed

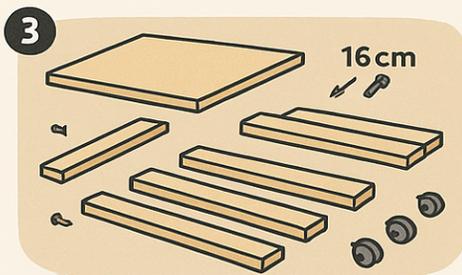

Tape measure • 4 caster wheels • Drawer slides (2) • Screws
Drill • Wooden panels • Pencil

1 MEASURE & MARK WIDTH

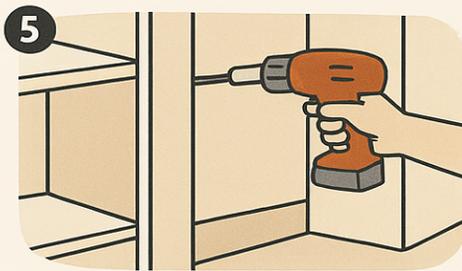

2 ATTACH DRAWER SLIDES

3 ASSEMBLE THE FRAME

4 ATTACH THE CASTERS

5 SECURE FRAME TO SLIDES

6 INSTALL & TEST PANTRY
